Goalball

This article is part of a series produced by the British Council to help you learn English and learn about different Paralympic sports.

Goalball is played by visually impaired athletes using a ball with bells inside.

DID YOU KNOW?

Goalball
Goalball was invented by Austrian Hanz Lorenzen and German Sepp Rends in 1946. They created the game to help soldiers who had fought in World War II and received injuries to their eyes. Paul Jacobs was a British soldier who lost his sight in an attack in Afghanistan. He has been working to promote the sport in the UK.

Goalball was first played at the Paralympic Games as an exhibition sport in 1976 in Toronto. The first world championships were held in Austria in 1978. Women first competed in the sport at the 1984 Paralympic Games in New York.

Nowadays it is played in more than 100 countries, but before the London 2012 Paralympics it was not very popular in the UK. However, Jacobs believes that it is the ‘perfect sport for many of the soldiers who have been blinded or partially blinded in recent wars’. He has been determined to promote the game in the UK and, as a result, it has become much more popular.

Indeed, because of Jacobs’s hard work the number of goalball clubs in the UK has increased considerably. Before London 2012 there were fewer than 20 clubs but there are now 34. At the 2012 Paralympics, Team GB did not win a single medal in both the women’s and men’s events. However, the men’s team recently beat the London 2012 winners, Finland, and a mixed team of Britain’s best players came second in an international tournament in Denmark.

All of this suggests that Britain have an excellent chance of winning their first goalball medal at the Rio 2016 Paralympics. If they do, the amazing Paul Jacobs will certainly deserve some credit!

Rules for Paralympic Goalball

What is it?
Goalball is a sport for visually impaired athletes. It started as an activity to help injured soldiers to recover after returning from World War II.

The aim of goalball is to score by rolling the ball into the other team’s goal. The other team tries to stop or block the ball with their bodies.

Who can participate in goalball at the Paralympics?
Goalball is open to all athletes with visual impairments who meet the criteria given by the International Blind Sports Federation (IBSA).

Athletes must wear eyeshades (a mask which is put over the eyes). This means all participants compete against each other equally.

How is it played?
- Each team consists of six players. There are no more than three players per team on the pitch at any time.
- The pitch is 18 metres long by 9 metres wide.
- The goals are the same length as the whole width of the pitch.
- There is a bell inside the ball which allows players to hear it rolling along the ground.
- Games last for 14 minutes with two halves of seven minutes.
- The team with the most goals after 14 minutes is the winner.
- If each team has the same number of goals after 14 minutes, the game is decided by extra throws. This is similar to a penalty shootout in football.
- If a player fouls someone, the other team wins possession of the ball.
- A penalty throw is awarded for more serious fouls.
