Antonio Rebollo was a Paralympic athlete because he suffered from polio when he was a baby. He represented Spain at the Paralympics in 1984, 1988 and 1992, and won two silver medals and a bronze. He was chosen from 200 archers to shoot the arrow but he only found out two hours before the famous moment. So what did we, the television audience, see? Never special effects and camera angles meant that millions of people watching on TV around the world were amazed as they 'saw' his burning arrow go through the air and start the Olympic Flame.

But according to BBC journalist John Mathews, that is not really what happened. "Rebollo and all the other archers could not allow any chance of him not hitting the torch. If it had landed in the crowd it could have hurt somebody. Rebollo was told to shoot his arrow safely out of the stadium.
